

New Contractor and FTx™ Airless Spray Guns

Longer life

Easier to use

Better spray pattern

- Choose the FTx gun for fine finish and where manoeuvrability is required. Lightest gun.
- Choose Contractor guns to spray larger surfaces and where a sturdy, yet comfortable grip is needed.
- Choose one of the Silver Plus™ guns when spraying thicker materials requiring pressures up to 500 bar.

New FlexSeal™ needle design:

Our objective was to greatly increase the life of this wear part. **How?** The seal is now enclosed in a flexible cover. The result is that the seal is never in contact with the paint, which causes wear. But there is more! With the gun trigger open, the FlexSeal inflates like a balloon. Pressure inside the gun pushes against this inflated seal. This causes the needle to shut-off easier and faster, making it the first hydraulically assisted shut-off gun system.

Not convinced yet? Then what about our new seat design which reduces the space between the needle and the tip by an amazing 60%. Thus, greatly reducing the amount of paint spitting. Best of all, the new FlexSeal needle design is modular. Meaning that it can be replaced, on the job, in three simple steps. No testing or adjustments required. Just keep painting!

More exclusive features:

EasyOut gun filter: filters the paint from the inside out of the filter. This effectively captures all debris inside the filter mesh. It is an easy filter to remove and clean at the end of the day: debris simply washes out (a small brush is recommended for full cleaning) and ready to be used again.

Sealed-off spring: the spring of the gun is no longer part of the needle design. It is separated and no longer in contact with the paint. This greatly improves the life of the spring while preventing any possible malfunction caused by paint drying or debris catching on the spring. Modular, the spring can be replaced in the field and does not require any adjustments.

And more: a new premium nickel finish, a new detachable trigger guard, a new lighter gun trigger, a new Easy-to-reach trigger lock and a new EasyGlide™ gun swivel.
